Opens Dec. 1, 2022
Closes Feb. 1, 2023

ASU Ira A. Fulton Schools of
Engineering
Arizona State University

Summer research initiative

graduate.engineering.asu.edu/suri

Students work alongside faculty on cutting edge research and gain an understanding for the graduate experience while also gaining valuable research skills.

Students are supported by and connected to industry partners for mentoring, networking and career possibilities. Students gain an understanding of the connection between research, a graduate engineering degree and industry.

Faculty and industry partners are able to connect and build potential research collaborations.

The **Ira A. Fulton Schools of Engineering at Arizona State University** offers summer research opportunities for qualified students to gain engineering research experience at a top research university. Participants acquire an in-depth understanding of what it would be like to pursue a PhD degree through an 8-week summer research program. Eligible U. S. citizens, permanent residents and ASU-sponsored F1/J1 visa students may receive a **\$5,000 stipend plus living expenses**. Volunteer opportunities are also available for interested students not eligible for financial support. Research projects

across a wide range of engineering fields in both in-person and virtual modes are available. Students between the junior and senior years of their undergraduate degree and those pursuing Master's degrees who are considering pursuing a PhD will be given highest consideration. Participants work under the mentorship of research faculty for the **8-week long research program** and have opportunities to network with industry partners, other faculty and their peers through a variety of events and activities. Tentative program dates for Summer 2023 are May 25th to July 22rd and subject to change.

Hear from the participants

"The SURI program allowed me to learn how to focus on one specific goal of a larger research project from start to finish. I was able to participate in all the steps of experiment design, data collection, data analysis and scientific writing of findings."

"I honestly think it's amazing that I was able to work with and get to know people from all across the globe, all passionate about this research! It's a wonderful feeling and it has definitely made me more open to such experiences in the future!"

"The biggest take away from participating in the SURI program was for me to continue to pursue research in topics that I think are the most meaningful and that could help other people and the planet."
